NEW! POLAR PACKAGE OPTION

Dutchmen has just introduced a great new option called the Polar Package. By installing a tough, reflective radiant foil barrier in the ceiling and floor, we can now return 97% of your unit's radiant heat back into the living space; heat that would otherwise have transferred to the frigid outdoors.

As an added bonus, this material reflects hot summer sun into the atmosphere, instead of allowing it to find its way into your unit. Plus, it offers an approximate R-40 value to your floor and ceiling.

Choose Dutchmen's new Polar Package option. Your air conditioner, furnace and pocketbook will all thank you for your decision!
