*The chassis manufacturer recommends the installation of a supplemental brake control system to activate the brakes on the vehicle or trailer you are towing. Hitch receiver ratings expressed are maximum for the hitch receiver installed and may require the purchase of additional equipment that is dependent on the weight of the towed load. Consult with hitch receiver manufacturer for further information.

1. GVWR (Gross Vehicle Weight Rating) is the maximum permissible weight of this fully loaded motor home. The GVWR is equal to or greater than the sum of the (UVW) unloaded vehicle weight plus the (CCC) cargo carrying capacity⁶.
2. GAWR (Gross Axle Weight Rating) is the maximum permissible loaded weight a specific axle is designed to carry.
3. GCWR (Gross Combined Weight Rating) is the value specified by the motor home manufacturer as the maximum allowable loaded weight of this motor home with its towed vehicle. Towing and braking capacities may be different. Refer to Fleetwood and chasis manufacturer's manuals for complete information.
4. Length measured from front bumper to rear bumper (excludes accessories).
5. Excludes safety equipment and awnings.
6. Motor homes feature a body-width over 96” which will restrict your access to certain roads. Before purchasing, you should research any state and/or province road laws which may affect your usage.
7. Tank manufacturer’s listed water capacity (WC). Actual propane capacity is 80% of water listing as required by the safety code.

Liquid Weight Reference: Water (gal) = (8.3 lbs/3.8kgs), Fuel (gal) = (6.1 lbs/2.8 kgs), Propane (gal) = (4.2 lbs/1.9 kgs)

Metric Conversion: Multiply pounds x 0.453 to obtain kilograms. Multiply gallons x 3.785 to obtain liters. Multiply liters x 61 to obtain cubic inches.
