The Alumascape Suite features Holiday Rambler’s exclusive Alumaframe® Superstructure. Our revolutionary system of aluminum H and C-Channel crossmembers runs the entire length of the unit, with double-welded intersections for added strength. This rigid design is both lighter and sturdier than wood or tubular aluminum frames – and much more reliable than butt-welded or screwed joint designs. From dirt roads to potholes, you can count on Alumaframe® to handle the relentless stresses of the road and provide superior structural integrity for many years to come.

**CONSTRUCTION**

**STAY COOL ON THE INSIDE**

Holiday Ramblers are cooler than other RVs – literally. When put to the test in a thermal chamber, temperatures inside other RVs rose almost 30% more every hour than the Holiday Rambler model.* The secret lies in our exclusive, multi-layer insulation which blocks heat out, keeping the inside nice and cool.

* Test performed by an independent testing facility.
  Based on measurements taken every 15 minutes.

**6-LAYER FLOOR: “WORKS IN THE BASEMENT”**

The underside of your fifth wheel features a 6-layer floor and a fully enclosed, heated and protective underbelly. The underbelly encloses the wiring harness and fresh water tanks. It helps protect the fluids from freezing and improves the overall insulation of the coach. The underbelly’s outer shell is made of rugged composite material that withstands damage from road debris. By smoothing out the undercarriage, the underbelly provides an unrestricted air flow that results in easier towing and improved gas mileage. In addition, the frame is coated with a rust-inhibiting, electro deposit ion coating.

**SLIDE-OUT**

When you purchase a Holiday Rambler, you can be sure the slide-out boxes are some of the strongest and most reliable you’ll find anywhere. They feature our exclusive multi-layer construction to give you maximum insulation and to reduce the chance of warping, twisting or shifting. In addition, the linear actuator has a mechanical room lock that is built in, and there are adjustable built-in stops for in and out positions.

- **A** Bearing packs are bolted in 4 places, locking the gear and rack in place
- **B** A manual crank and extension rod comes standard with every unit, to serve as override if needed
- **C** Actuator motor is positioned to provide smoother movement and reduce twisting on the slide-out room
- **D** Alignment mechanism is separate from the linear actuator movement mechanism

**6-LAYER EXTERIOR WALL (left to right)**

- Smooth .040 aluminum is standard; high-gloss gel coat fiberglass is optional
