

# 1986 *Elandan*

LIMITED EDITION

Elandan®, the most exceptional Winnebago ever built, is now available in a special LIMITED EDITION for the most discriminating motor home traveler. Only 300 of these extraordinary models will be produced.

Featuring seamless sidewall construction, a new electronic instrument panel, special Flexsteel seating, and the newest model Coleman roof air conditioners, the 34-foot Elandan Limited Edition is equipped with a wide compliment of standard features to make every trip an enjoyable leisure experience.

## Special Seating Package

A special upgraded driver's compartment and lounge seating package by Flexsteel is included in the Limited Edition.

The driver's seat features six-way power adjustment with manual lumbar support. The reclining and swiveling co-pilot's seat is equipped with adjustable lumbar support and an adjustable footrest. The lounge couch is a Magic Bed convertible and has a large slide-out drawer behind the lower front skirt.

The two reclining lounge chairs have swivel-slide bases and lever operated footrests. The couch and chairs are trimmed with oak, and feature new 1986 fabrics.

## Special Roof Air Conditioner Package

The latest model roof air conditioners from Coleman are standard equipment on the Limited Edition. The two Delta TX models have a number of unique new features. These include an infinite position blower speed control, automatic quick cool-down, low-power sensor, and power exhaust.

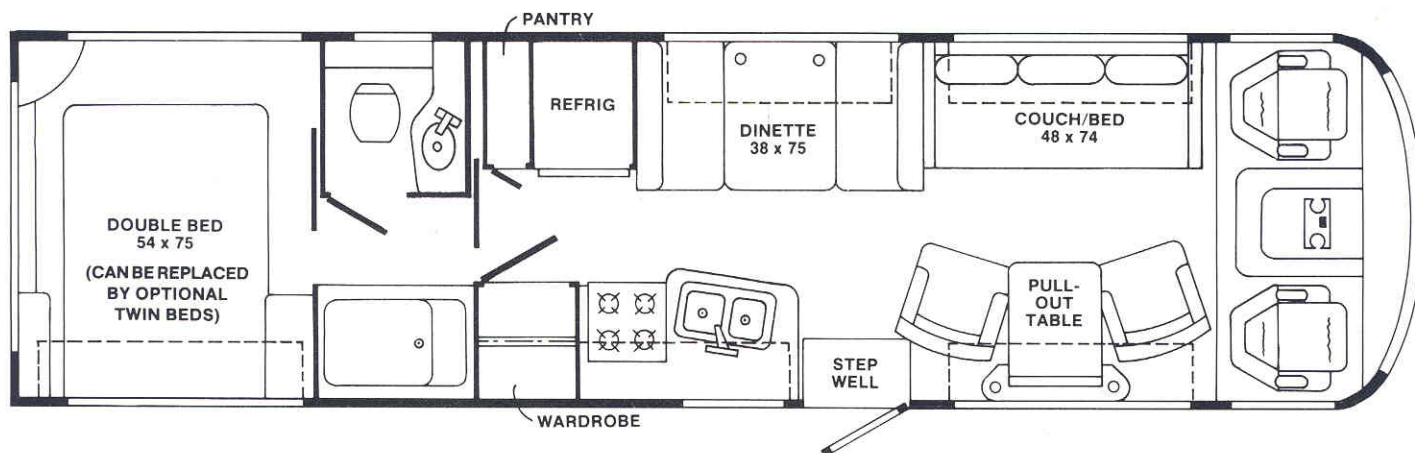

## Electronic Instrument Panel

A colorful new liquid-crystal instrument panel display is included in the Limited Edition. Both digital and moving bar readouts are displayed for speedometer, tachometer, and voltmeter functions. The speedometer readout is switchable between English and metric. Oil pressure, water temperature, and fuel economy levels are shown through moving bar graphs.

When the ignition is turned on, the display lights up and runs a check on itself. At this time, and also while underway, a problem with any of the monitoring systems is displayed. The display's intensity can be adjusted for varying cockpit light levels.

The vehicle odometer, generator hour meter, and new resettable trip odometer are mounted in the dash below the electronic display.
